1. Introduction

The Ametek Jofra CSC101 is a handheld Compact Signal Calibrator, primarily designed to calibrate and verify 4 to 20mA process loops and precision voltage signal conditioning equipment. The CSC101 can both source and measure current over a 0 to 24mA range and measure voltage from zero to 30VDC. The calibrator has the following features and functions:

- A digital "knob" along with selectable decade control allows quick and easy adjustment of the desired output.
- A large easy to read display used to display electrical parameters.
- Measurement and sourcing capabilities for current.
- Flow Calculation and Valve Test Capabilities.
- Voltage measurement capabilities.
- An interactive menu
- All input and output jacks are protected through internal self resetting fuses providing protection to 240VAC.

1.1 Contacting Ametek

US, Canada, Latin America AMETEK TCI at 1-800-527-9999
Europe, Africa, Middle East AMETEK Denmark A/S at + 45 4816 8000
Asia AMETEK Singapore Pte. Ltd. at + 65 (64) 842 388

1.2 Standard Equipment

Inspect the unit carefully upon receipt. Save packing carton in case re-shipment is necessary. If there appears to be any damage, equipment missing or if there are any questions about the unit, contact AMETEK.

Check to see if your calibrator is complete. It should include:

- CSC101 Calibrator
- Instruction Manual
- Test Leads
1.3 Safety information

**Symbols Used**
The following table lists the International Electrical Symbols. Some or all of these symbols may be used on the instrument or in this manual.

<table>
<thead>
<tr>

This calibrator must be recycled or disposed of properly (2012/19/EU).

The following definitions apply to the terms “Warning” and “Caution”.

• “Warning” identifies conditions and actions that may pose hazards to the user.
• “Caution” identifies conditions and actions that may damage the instrument being used.

Use the calibrator only as specified in this manual, otherwise injury and damage to the calibrator may occur.

⚠️ Warning

To avoid possible electric shock or personal injury:

• Do not apply more than the rated voltage. See specifications for supported ranges.
• Follow all equipment safety procedures.
• Do not use the calibrator if it is damaged. Before you use the calibrator, inspect the case. Look for cracks or missing plastic. Pay particular attention to the insulation surrounding the connectors.
• Select the proper function and range for your measurement.
• Make sure the battery cover is closed and latched before you operate the calibrator.
• Remove test leads from the calibrator before you open the battery door.
• Inspect the test leads for damaged insulation or exposed metal. Check test leads continuity. Replace damaged test leads before you use the calibrator.
• When using the probes, keep your fingers away from the probe contacts. Keep your fingers behind the finger guards on the probes.
• Do not use the calibrator if it operates abnormally. Protection may be impaired. When in doubt, have the calibrator serviced.
• Do not operate the calibrator around explosive gas, vapor, or dust.
• Disconnect test leads before changing to another measure or source function.
• To avoid false readings, which could lead to possible electric shock or personal injury, replace the battery as soon as the battery indicator appears.
• To avoid personal injury or damage to the calibrator, use only the specified replacement parts and do not allow water into the case.
**Caution**

To avoid possible damage to calibrator or to equipment under test:

- Disconnect the power and discharge all high-voltage capacitors before testing resistance or continuity.
- Use the proper jacks, function, and range for your measurement or sourcing application.
- To avoid damaging the plastic lens and case, do not use solvents or abrasive cleansers.

Clean the calibrator with a soft cloth dampened with water or water and mild soap.

### 2. Calibrator Interface

![Calibrator Interface Diagram]

**Figure 1**

#### 2.1 Inputs and Primary User Interface

The Calibrator has two numeric displays. The main display area displays the signal which is being sourced or measured. The smaller numeric display area is used in the mA modes to display the percent of range. Normally values in the 4mA to 20mA range correspond to a percentage from 0% to 100%. The unit can also be configured for 0 to 20 mA fullscale.
The CSC101 has one input terminal located on the top of the unit. These terminals are provided for all milliamp functions and voltage functions. The terminals will accommodate standard banana plugs.

The CSC101 has an knob and a series of key used to operate and configure the unit.

Figure 1 shows the layout of the calibrator keypad while Table 1 lists the calibrator's components and describes their functions.

2.2 Calibrator Configuration

2.2.1 Main Menu

The Main Menu is used to configure the primary mode of the calibrator and allow access to the calibrator set-up.

<table>
<thead>
<tr>
<th>mA Source</th>
</tr>
</thead>
<tbody>
<tr>
<td>mA Simulate</td>
</tr>
<tr>
<td>mA Measure</td>
</tr>
<tr>
<td>mA Measure with 24V</td>
</tr>
<tr>
<td>Volts Measure</td>
</tr>
<tr>
<td>Calibrator Setup Menu</td>
</tr>
</tbody>
</table>

The knob is used to highlight the menu selection in reverse video. Pressing the knob executes the highlighted action. If the user can exit without making a change by pressing the Menu/Exit key.

2.2.2 Calibrator Setup Menus

The Calibrator Setup consists of two menu screens.

<table>
<thead>
<tr>
<th>Auto Ramp Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto Step Time</td>
</tr>
<tr>
<td>Flow Calculation</td>
</tr>
<tr>
<td>Valve Test</td>
</tr>
<tr>
<td>HART 250Ω Resistor</td>
</tr>
<tr>
<td>Other Parameters</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>mA Span</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contrast</td>
</tr>
<tr>
<td>Auto Shutdown Time</td>
</tr>
</tbody>
</table>
The knob is used to highlight the menu selection in reverse video. Pressing the knob executes the highlighted action. The user can exit without making a change by pressing the Menu/Exit key.

### Setting Auto Ramp Time

<table>
<thead>
<tr>
<th>Auto Ramp Time</th>
<th>10 SEC.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Press &amp; hold to Save</td>
<td></td>
</tr>
</tbody>
</table>

This is the time for the mA ramp function (See Section 5 Advanced Features). The value can be set from 5 to 300 seconds. The knob is used to adjust the value. When the desired value is attained press and hold the knob to save it. If you wish to revert to the previous value press the menu exit key.

### Setting Auto Step Time

<table>
<thead>
<tr>
<th>Auto Step Time</th>
<th>10 SEC.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Press &amp; hold to Save</td>
<td></td>
</tr>
</tbody>
</table>

This is the time for the mA Auto Step Feature (See Section 5 Advanced Features). The value can be set from 5 to 300 seconds. The knob is used to adjust the value. When the desired value is attained press and hold the knob to save it. If you wish to revert to the previous value press the menu exit key.
Enabling Valve Test

<table>
<thead>
<tr>
<th>Valve Test Enable</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
</tr>
</tbody>
</table>

Use the knob to highlight the selection. Press the knob to store the highlighted selection. If you wish to revert to the previous setting press the menu exit key.

Enabling Flow Calculation

<table>
<thead>
<tr>
<th>Valve Test Enable</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
</tr>
</tbody>
</table>

Use the knob to highlight the selection. Press the knob to store the highlighted selection. If you wish to revert to the previous setting press the menu exit key.

Enabling Hart Resistor

<table>
<thead>
<tr>
<th>HART Resistor Enable</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
</tr>
</tbody>
</table>

Use the knob to highlight the selection. Press the knob to store the highlighted selection. If you wish to revert to the previous setting press the menu exit key.
Selecting mA Span

mA Span Selection
4 to 20 mA
0 to 20 mA

Use the knob to highlight the selection. Press the knob to store the highlighted selection. If you wish to revert to the previous setting press the menu exit key.

Contrast Adjustment

Contrast
Sample normal video
Sample reverse video

Use the knob to adjust the contrast. The range of values is shown by the bar graph, with higher contrast shown by a longer bar. The sample normal and reverse video text lines allow evaluation of both text modes. Press the knob to store contrast value. If you wish to revert to the previous setting press the menu exit key.

Configuring Auto Shutdown

Auto Shutdown Time

10 MIN.

Use the knob to adjust the time before the unit with shutdown if the user interface is not used. Auto shutdown can also be disabled is disable by turning the knob counter clockwise until “Disabled” is displayed on the screen.
3. **Operation in the Current Mode (4mA to 20mA)**

The CSC101 offers four (4) different operational functions when operated in the current or milliamp mode. These functions are:

1. mA Source - Current can be sourced from the CSC101 over a 0 to 24mA range into loads of up to 1000 ohms.
2. mA Simulate - The CSC101 can act like a 2-wire transmitter by controlling the loop current when power comes from an external power supply.
3. mA Measure - The CSC101 displays input current over a range of 0 to 24mA.
4. mA Measure with Loop Power - Displayed as mA Measure 24V, this mode measures current while simultaneously supplying 24 volts to the loop.

### 3.1 Sourcing Current

Figure 2 shows how to connect the CSC101 to source current.

![Figure 2](image)

### 3.2 Simulating Current

Figure 3 shows how to connect the CSC101 to simulate current (2-wire mode) using an external power supply.
3.3 Measuring Current

Figure 4 shows how to connect the CSC101 to measure 4 to 20mA.

3.4 Measuring Current with Loop Power

Figure 5 shows the CSC101 connected to a 2-wire transmitter where the CSC101 is providing 24 volt loop power while reading the resultant current.
4. **Operation in the Voltage Mode**

The CSC101 can measure voltage up to 30 VDC.

4.1 **Measuring Volts (30VDC max)**

Figure 6 shows how to connect the CSC101 to measure volts.

---

**Figure 5**

**Figure 6**
5. **Advanced Features**

The CSC101 has many advanced features that are available through the Calibrator Setup Menus. How the features are enabled and what they do is described below.

5.1 **Step and Ramp Operation**

The CSC101 has several unique features that are helpful aids when doing milliamp calibrations. The percent keys allow the user to the output to 0% of scale, 100% of scale or in 25% steps from 0 or 4 to 20 mA. The "Step/Ramp" allows hands free operation by automatically stepping or ramping the milliamp output.

5.1.1 **Manual Stepping**

1. Use the main menu to set the CSC101 to source or simulate current.
2. Press the "25%" key to step the output in 25% increments from 4mA to 20mA and 20mA to 4mA.

5.1.2 **Automatic Stepping & Ramping**

1. Set the CSC101 to source or simulate current. See figures 2 & 3.
2. The CSC101 has separate Auto ramp and step times. Use the menu system to set the step or ramp time. (see section 2.2 Calibrator Configuration)
3. Once the desired times are set use the \{ramp/step\} to continually ramp or step the value from 0% to 100% and back.

5.2 **Valve Test**

The has CSC101 has a Valve Test mode for verifying proper operation of valves. In Valve Test user can step the output to the following values: 3.8 mA, 4.0mA, 4.2mA, 8.0 mA, 12.0 mA, 16.0 mA, 19.8 mA, 20.0 mA, 20.2 mA.

1. Use the main menu to set the CSC101 to source or simulate current.
2. If Valve Test is not enabled use the menu system to enable it. (see section 2.2 Calibrator Configuration)
3. The Press the Automatic Stepping Function or the "25%" key to step the output to verify the proper valve operation.

5.3 **Flow Calculation**

The has CSC101 has a Flow Calculation mode for displaying flow (0-100%) as a function of mA. Flow is displayed in the percent display. Flow Calculation can be enabled through the menu system. (see section 2.2 Calibrator Configuration)
5.4 Hart 250Ω Resistor

The CSC101 has the ability to insert a 250Ω resistor in series with the power supply in order to facilitate the use of a Hart communicator. The Hart resistor can be enabled through the menu system. (see section 2.2 Calibrator Configuration)

7. Maintenance

7.1 Replacing Batteries
Replace batteries as soon as the battery indicator turns on to avoid false measurements.

7.2 Cleaning the Unit

**Warning**

To avoid personal injury or damage to the calibrator, use only the specified replacement parts and do not allow water into the case.

**Caution**

To avoid damaging the plastic lens and case, do not use solvents or abrasive cleansers.
Clean the calibrator with a soft cloth dampened with water or water and mild soap.

7.3 Service Center Calibration or Repair

Only qualified service personnel should perform calibration, repairs, or servicing not covered in this manual. If the calibrator fails, check the batteries first, and replace them if needed.

Verify that the calibrator is being operated as explained in this manual. If the calibrator is faulty, send a description of the failure with the calibrator. Be sure to pack the calibrator securely, using the original shipping container if it is available.

AMETEK Sensors, Test & Calibration
A business unit of AMETEK Measurement & Calibration Technologies Division offering the following industry leading brands for test and calibration instrumentation.

JOFRA Calibration Instruments
Temperature Calibrators
Portable dry-block calibrators, precision thermometers and liquid baths. Temperature sensors for industrial and marine use.
Pressure Calibrators
Convenient electronic systems ranging from -25 mbar to 1000 bar - fully temperature-compensated for problem-free and accurate field use.
Signal Instruments
Process signal measurement and simulation for easy control loop calibration and measurement tasks.

M&G Deadweight Testers & Pumps
Pneumatic floating-ball or hydraulic piston dead weight testers with accuracies to 0.015% of reading. Pressure generators delivering up to 1,000 bar.

Crystal Pressure
Digital pressure gauges and calibrators that are accurate, easy-to-use and reliable. Designed for use in the harshest environments; most products carry an IS, IP67 and DNV rating.

Lloyd Materials Testing
Materials testing machines and software that guarantees expert materials testing solutions. Also covering Texture Analysers to perform rapid, general food testing and detailed texture analysis on a diverse range of foods and cosmetics.

Davenport Polymer Test Equipment
Allows measurement and characterization of moisture-sensitive PET polymers and polymer density.

Chatillon Force Measurement
The hand held force gauges and motorized testers have earned their reputation for quality, reliability and accuracy and they represent the de facto standard for force measurement.

Newage Hardness Testing
Hardness testers, durometers, optical systems and software for data acquisition and analysis.
